

## **INTRODUCTION – Section 1**

Understanding the world of imagination is a journey in which we were all born to explore. We are born with an imagination that we start using as a child. How we use it changes throughout life. It is with us through everything. It helps us view the world in our own special way. It makes us feel like a victim, villain or hero based on how we choose to use it. From playing games in the backyard as a kid to writing movies for Hollywood, imagination continues to shape both the good and bad in us as individuals and the entire human species.

It guides and contributes to our personal life while combining with the imaginations of others to shape our future. It is used for both fun and work. It ranges from painting a picture for someone we love to working on a team that is planning to send man to the planet mars.

We make the decision to use it for positive or negative things. It can be considered as one of the most valuable or destructive things we have. It is also very mysterious. We still do not know where it comes from or how it exactly works. It still remains as a mysterious part of us that we are born with. Perhaps, it is the uppermost powerful thing we both have and use. Could it be overseeing our likes, dislikes, instincts and special talents? Is it the core of all the things we don't fully understand yet? If so, what does it

have set for us next? There isn't a right or wrong answer as to where your imagination comes from because wherever you imagine it to come from is what you believe. This is the same for everything. Maybe this is why we automatically connect the act of using our imagination with "Make Believe" or "Pretend"

**U**KNIGHTED **i**MAGINATION (**Ui**) empowers those willing to explore and use imagination as a game that proves coincidence is the path to reason. Those who seek to discover more within the pieces that are already here. This book is designed to inspire people of all ages who would like to refresh and activ**8** the power of their personal imagination better than before.

Imagine all the puzzle pieces of past, present and future knowledge were secretly scattered like a treasure hunt. Like a game that started when we started. Any invention or new discovery works the same. It happens when someone gains the ability to put some pieces of a puzzle together that hasn't been discovered yet.

Albert Einstein put the theory of relativity together. The individual pieces he used were defined before he was born. The  $E = mc^2$  and the definitions of each evolved over time long before was here in the physical. He put the pieces together that included the journey and life of each piece of the puzzle.

That would suggest that knowledge evolves as a life of its own. So, if we can imagine that all the pieces of past, present and future knowledge are hidden here somewhere, where could that be? What if our imagination is the secret place? We are born with it while it still remains naturally mysterious. We have fun with it and we also use it for things that are serious and influential.

Using our own imagination, we connect with something that is already in us. We share it when working together with others. Teams of imagination (people) work and create new things all the time. With every new creation, a new influence is born.

Our entire communication platform was developed to grow over time. Letters, numbers, elements and equations are just a few examples of growth that started much differently than they are today.

Our communication is life. Letters form words and words form sentences. Numbers and signs form equations. The definitions and meanings of our communication tools are organized. Without them, we wouldn't be able to describe anything. We wouldn't have a thought because the word itself and meaning of the word 'thought' wouldn't exist.

It is impossible to imagine a world without communication because this sentence wouldn't exist. It takes an active imagination to think of the moment when the first drawing,

letter, word, or number was developed. Take that moment and fast forward to our present day of communication.

It is amazing to think that imagination existed both then and now. It is puzzling to think that we don't know more about it.

Everything that we use today is here because of a something we all share in common. It has always been here. Our imagination makes it all possible. **Ui** will put some hidden pieces together of imagination by connecting pieces in a marveling way. It requires your current imagination and willingness to activ**8** more of it.

Imagination is far superior to theory as it does not require the same proof as theory. It is both a powerful and mysterious zone that drives everything that exists...including every theory and all of us.

Refresh your imagination. Activ**8** more while you explore, engage, educate and empower with **Ui**, never to be confused with Ai...
